SUMMARY

Software Engineer focused on infrastructure, platform engineering, and distributed systems, with experience building scalable cloud infrastructure, developer tooling, data-processing systems, and customer-facing platforms.

EXPERIENCE

- Zuora** Chennai, India
Software Engineer III; promoted from Software Engineer II May 2024 – Present
 - Designed and implemented multi-cluster Flink routing and load balancing, enabling horizontal scaling and tenant/job-level routing to dedicated clusters while removing single-cluster dependency.
 - Designed and implemented self-service S3 connectivity for Mediation customers, automating IAM provisioning and backend workflows to eliminate manual engineering intervention.
 - Led infrastructure modernization and production migrations across EKS, ARM64/Graviton, Hudi, and Flink, coordinating Infrastructure, SRE, DBA, and Mediation teams.
 - Served as the primary technical representative from the former Togai team during its infrastructure migration into Zuora, coordinating a near-zero-downtime transition and building a Java Spring-based SPI exposing ClickHouse data to Zuora's central reporting service.
- Togai** Chennai, India
Software Engineer Jul 2023 – May 2024
 - Led the transition from AWS OpsWorks to Kubernetes-based infrastructure, dockerizing services and migrating approximately six stateless services to EKS while moving PostgreSQL, Redis, and NATS workloads to EC2 using Terraform and Helm.
 - Built an internal Apps/Flows migration tool that replaced error-prone manual REST API operations with repeatable, state-aware workflows, improving developer productivity and deployment consistency.
 - Implemented Google and Microsoft OAuth integrations with the existing IAM system and worked directly with customers on solution implementation, data migrations, reconciliation, infrastructure requirements, and production troubleshooting.
- Citi** Chennai, India
Summer Analyst May 2022 – Jul 2022
 - Contributed to a Python and PySpark reporting and validation framework for monthly migration of approximately 1 billion KYC records, automating configuration, validation reports, and stakeholder notifications to reduce a recurring 1–2 week process to a few hours.

EDUCATION

- SSN College of Engineering** Chennai, India
B.E. in Computer Science and Engineering; GPA: 9.66/10.0; Department Gold Medalist Aug 2019 – May 2023

PROJECTS

- Empulse – Engineering Intelligence Platform:** Multi-tenant engineering intelligence platform integrating GitHub, Jira, Notion, and Slack into a knowledge graph for engineering risk, ownership, incident investigation, and employee handover analysis using Cognee, FastAPI, PostgreSQL, and Next.js.
- ZeroGravity – Live Satellite Tracking Platform:** Cloud-deployed satellite tracking platform with independently deployed ingestion, caching, API, and visualization services using Node.js, Valkey, React, Three.js, and Zerops.

TECHNICAL SKILLS

Languages: Java, Python, Go, JavaScript, TypeScript, SQL

Infrastructure: AWS, Kubernetes, EKS, Terraform, Helm, Docker, Linux

Distributed Systems: Apache Flink, Kafka, ClickHouse, Hudi, PostgreSQL, Redis, NATS, S3

Frameworks: Spring Boot, NestJS, FastAPI, React, Next.js
